- | | |
|---|---|
| <input type="checkbox"/> applied resin or glass ionomer dental sealant on the tooth/teeth | |
| <input type="checkbox"/> applied silver diamine fluoride on baby tooth/teeth showing signs of decay | |
| <input type="checkbox"/> applied fluoride varnish | |
| <input type="checkbox"/> assessed the dental sealant previously applied by public health | <input type="checkbox"/> no correction is needed |
| | <input type="checkbox"/> a correction will be performed |
| <input type="checkbox"/> reapplied the dental sealant previously applied by public health | |

Comments: _____

Dental services provided by public health are an effective way to improve your child's dental health. However, they do not replace the regular appointments with your health professional.

- ☐ A dental issue has been observed in one or more teeth. It is recommended that you visit your dentist soon. Some services, such as examinations, X-rays, and fillings, are **free** for children aged 9 and younger. For more information, you can consult the website of the [Régie de l'assurance maladie du Québec](http://www.quebec.ca/assurances-maladie).

For more information, please contact the public health dental hygienist.
